EXPERIENCE

Software Developer IBM India Software Labs	Jul 2024 – Jun 2026 <i>Bangalore, IN</i>
- Engineered Java, Spring Boot, Scala and Go based microservices for IBM Watsonx’s Agentic AI platform, delivering concurrent, high-performance RESTful APIs. - Reduced AI model onboarding time by 18% by streamlining deployment pipelines across multiple model families including BYOM, Foundation Models, LoRA, and TSFM. - Accelerated deployment rollout speed by 26% through Kubernetes and Docker orchestration optimizations and CI/CD automation on AWS (EKS, EC2, S3). - Migrated distributed state storage from ETCD to Redis and implemented a caching layer, cutting read latency by 28% and improving throughput for high-frequency access patterns. - Cut debugging and production issue investigation effort by 35% by implementing distributed tracing and monitoring with OpenTelemetry and Instana. - Engineered Kafka and RabbitMQ event-driven pipelines with Redis caching and optimized MongoDB interaction patterns for fault-tolerant, high-throughput workload processing. - Built an end-to-end AI model lifecycle simulator and Go-based FVT validation frameworks that surfaced critical integration defects pre-release, earning IBM recognition for improved platform stability and release confidence. - Led HLD/LLD design sessions and code reviews, mentoring junior engineers and onboarding new members on backend services and deployment workflows.	
Software Development Engineer Amadeus Software Labs	Aug 2022 – Jul 2024 <i>Bangalore, IN</i>
- Developed and scaled Java Spring Boot REST APIs for high-volume, real-time airline financial workflows on AWS (EC2, S3), with a focus on concurrency, reliability, and low-latency performance tuning. - Reduced MongoDB query latency by 15% for high-volume transactional workloads through systematic profiling, indexing, and targeted query tuning. - Automated build, test, and CI/CD pipelines with Jenkins, cutting deployment time by 35% and reducing manual release effort and increasing deployment consistency. - Used Elasticsearch and Kibana for real-time anomaly detection, fast-tracked production issue resolution by 55%. - Troubleshooted and resolved production issues and conducted code reviews applying design patterns, enforcing engineering best practices and system stability across the team.	

SKILLS

Languages	Java, Scala, Go, SQL
Backend	Spring Boot, Microservices, RESTful APIs, Node.js
System Design	HLD, LLD, Distributed Systems, Event-Driven Architecture
DevOps & Cloud	Docker, Kubernetes, Jenkins, CI/CD, AWS
Databases	MongoDB, Redis, MySQL
Testing	JUnit, TDD, Integration Testing, FVT Frameworks
Technologies	Kafka, Git, Maven, Instana, OpenTelemetry, RabbitMQ, JSON, XML

EDUCATION

B.Tech in Information Technology Haldia Institute of Technology, Haldia	2018–2022 8.55 GPA
---	-----------------------

ACHIEVEMENTS

- IBM recognition** : IBM Special Recognition Award (x2) : Built a Go-based FVT framework improving deployment reliability by 28% on the Watsonx Agentic AI platform.
- Caching & Latency Reduction** : Cut read latency by approximately 30% by migrating distributed state from ETCD to Redis and implementing a caching layer.
- Amadeus Hackathon**: Secured 3rd rank in Amadeus Hackathon, building a scalable backend prototype.
- Solved **300+** DSA Questions across LeetCode and GeeksForGeeks.
